Clarity at hand

Portable, Crystal-Clear Night Vision.

NOX puts the capability for high-contrast night identification directly into your hands. **NOX** is an operational, hand-held observation system for standoff positive identification and surveillance at night.

NOX illuminates your surroundings with a near IR laser light that interprets and displays a natural, detailed view. **NOX** patented technology works in both open spaces and urban areas, and can identify objects through windows, fire, rain and haze. **NOX** is today's only device enabling you to gather visual court evidence at night and from substantial distances.

Class 1M - Eye safe laser.**

Facial recognition from up to 150 meters.*

Reads license plates from up to 350 meters.*

Penetrates windows, fire, smoke and dust.

High contrast, crystal-clear night identification. Gathers court-admissible visual evidence.

Video and still image recording.

Effective in harsh conditions including rain, snow and haze.

Commercial battery operated.

* Pro Version.

** Standard version.

NOX is the first mobile model of **Elbit Systems'** new HDId line of products, providing detailed imagery in daylight and in total darkness, in a revolutionary portable product. **NOX** smoothly upgrades your existing video-analytic capabilities by providing a sensor that is effective at night and in adverse weather conditions for surveillance from up to one kilometer away.

The Sharpest Night Vision Technology. Identified.

HDId (High Definition Identification), a revolutionary technology allowing unprecedented night capabilities, is brought to you by Elbit Systems, the world's leading defense electronics manufacturer.

Based on **Elbit Systems'** patented Laser Gated Intensified (LGI) technology, **HDId** enables high-resolution vision and identification abilities at night and in wide weather conditions, providing a level of identification unparalleled in today's market.

The technology delivers natural contrast night vision that overcomes reflections from nearby objects and adverse weather conditions, such as rain or haze, and is effective far beyond the reach of all other night cameras and infrared illuminators.

HDId provides uniform illumination of the entire in-sight range, allowing for the identification of facial features, boat names and license plates in even the most extreme situations, capable of penetrating windows, fire, smoke and dust.

The full **HDId** product line fulfills the need for detailed night identification for applications within the homeland security and law enforcement sectors. The **HDId-powered** products enable flexible implementation as stationary, mounted and mobile systems, from short-range to extra long-range applications.

Thermal technology

HDId technology

HDId technology's superior picture quality enables rich, detailed identification in the darkest nights.
